Nowadays, technology plays a large role in people's lives. There are various kinds of technologies that people can use in their everyday life. More and more people are becoming addicted to their gadgets, and now is difficult to imagine our life without phones, computers and the Internet. There are some negative consequences of often using them, but we should admit that ~~daily~~ everyday ~~was~~ thing became more convenient and easier than before.

First of all, I want to say that the Internet is a huge platform where people can find new friends, hobbies, study new things by themselves their own, and use this resource in variety ways. However, the Internet has ~~an~~ enormous influence ~~over~~ the people, so it could be really awful cause there is a lot of disinformation and people can believe in it. Secondly, most of teenagers are addicted to their gadgets. They can spend too much time by playing computer games or surfing on the social networking sites. It is really harmful for their health.

In the positive changes we can mention that doing household works became easier than before cause of machines that can vacuum ~~the~~ carpet, ~~or~~ washing the dishes or even doing a coffee. It is really value cause people can spend their time for ~~more~~ different things. Also, because of technologies today is really comfortable to make an appointment to the doctor, or apply documents to different organizations. Everything you need is just open the site and you can ~~to~~ not wait in long queues.

In conclusion, I want to say that technologies help us in everyday life and they became part of our life but we should know when that we should control it, not they us.
